SUMMARY

Semi-Flex cables are a tried and proven alternative to traditional Semi-Rigid Coaxial Cables. These cables provide comparable electrical performance to semi-rigid cables, while simultaneously allowing simple formation for use within RF/Microwave systems, as well as, for making external connections to other equipment. The outer conductor is comprised of a tin filled copper wire braid, which enables easy forming and re-forming by hand without the need for bending tools. With a Copper/Poly Foil inner layer along with Semi-Rigid style dielectric and center conductor, the Semi-Flex cables provide enhanced shielding and performance that exceeds traditional conformable cables. Semi flexible cable are mainly used in mobile communication base station, aerospace, military radar and so on.

The global Semi Flexible Cable market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
