SUMMARY

Chronic sinusitis affects more than 31 million people in the United States. It is more prevalent than heart disease and asthma and has a greater impact on patients' quality of life than chronic back pain or congestive heart failure. The majority of patients with chronic sinusitis are treated with oral antibiotics and/or nasal steroids, which can increase the risk of antibiotic resistance and cause unwanted side effects such as epistaxis (nose bleeds), nasal ulcers, and nasal and oral infections. The most effective treatments are Functional Endoscopic Sinus Surgery (FESS) and balloon dilation at high pressures, which are known to cause significant patient discomfort and are conducted in a surgical suite under general anesthesia or IV sedation.

The global Sinus Dilation Devices market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
