### SUMMARY

Solder, a fusible metal alloy, is used to create a permanent bond between metal workpieces. As solder must be melted in order to adhere to and connect the pieces together, a suitable alloy for use as solder will have a lower melting point than the pieces it is intended to join. Besides, whenever possible, the solder should also be resistant to oxidative and corrosive effects that would degrade the joint over time.

The global Solder market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
