SUMMARY

CTP refers to the process of imaging digital printing data (created by a computer) directly onto a printing plate. A thermal CTP recorder uses a high-power near-infrared laser to image digital printing data onto specially processed aluminum-base printing plates. CTP completely eliminates the need for film output and subsequent film to plate image transfer. Since processing is completely digital, there are no variations between plates, which results in superior printing quality.

The global Thermal CTP market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
