### SUMMARY

Tracheotomy is a surgical procedure which consists of making an incision on the anterior aspect of the neck and opening a direct airway through an incision in the trachea (windpipe). The resulting stoma (hole), or tracheostomy, can serve independently as an airway or as a site for a tracheostomy tube to be inserted; this tube allows a person to breathe without the use of their nose or mouth. Both surgical and percutaneous techniques are widely used in current surgical practice.

The global Tracheostomy market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
