SUMMARY

Transcranial magnetic stimulation (TMS) is a magnetic method used to stimulate small regions of the brain. During a TMS procedure, a magnetic field generator, or 'coil', is placed near the head of the person receiving the Tinnitus. The coil produces small electric currents in the region of the brain just under the coil via electromagnetic induction. The coil is connected to a pulse generator, or stimulator, that delivers electric current to the coil.

The global Transcranial Magnetic Stimulators (TMS) market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
