SUMMARY

A virtual private network (VPN) extends a private network across a public network, and enables users to send and receive data across shared or public networks as if their computing devices were directly connected to the private network. ('In the simplest terms, it creates a secure, encrypted connection, which can be thought of as a tunnel, between your computer and a server operated by the VPN service.') Applications running across the VPN may therefore benefit from the functionality, security, and management of the private network.

The global Virtual Private Network (VPN) market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
