SUMMARY

A water filtration system is a unit or machine designed to extract impurities and chemicals from water. There are many different types and sizes of water filtration units. A water pitcher with a small filter kept in the fridge is considered to be a water filtration unit, while a whole house system that filters all water that enters a dwelling is also one. An industrial water filtration unit designed to remove heavy metals and chemicals is bigger, more complicated water filtration unit. These units operate differently, but each has a common purpose: to purify water.

The global Water Filtration market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
