SUMMARY

The hot melt adhesives are defined as adhesives that melt and flow on application of heat and solidify on cooling to give a strong adhesion. They are applied in a molten state at temperatures that range from 120°C to 180°C depending on applications and materials to be bonded. Hot-melt adhesives are composed of three main components: a high-molecular-weight polymer that provides the adhesives' main structure and mechanical properties, a resin/tackifier that provides wetting and adhesion properties, and a plasticizer (or wax) that controls viscosity. The defining component of the hot melt and the basis by which it is segmented is the polymer, the most commonly used being polyamides, polyesters, ethylene-vinyl acetates, polyurethanes, and various block copolymers.
