SUMMARY

Liquid silicone rubber (LSR) is a high purity platinum-cure silicone. LSR is well suited for injection molding owing to its excellent liquidity. It's also very ideal for complex molds since it easily fits in the most complex parts of any mold. Liquid silicone rubbers (LSR) are characterized by a low viscosity compared to solid silicone rubbers (HTV). Liquid silicone rubbers are pumping able two-part compounds that are delivered ready to use. They are vulcanized by addition curing. Component A contains a Pt catalyst and component B a SiH-functional polysiloxane as curing agent. Compared to peroxide curing, liquid silicone rubbers do not release any curing byproducts. Liquid silicone rubbers (LSR) offer a wide range of applications, from the automotive industry, mechanical and process engineering, through electrical applications, the transmission and distribution industry, through to construction, foods, health care and the medical sector. LSR has two components as shown below. Once the two components are mixed, it will then start to cure very slowly.
