## **Abstracts**

### **SUMMARY**

A wrist dive computer is the one that can take depth and time information and applies it to a decompression model to track the dissolved nitrogen in your wrist tissue during a dive. Your computer continuously tells you how much dive time you safely have remaining. Your computer combines a depth gauge, timer and sometimes a submersible pressure gauge (SPG) into a single, useful instrument. This is immensely useful when it comes to avoiding decompression sickness.
