SUMMARY

Catalyst is widely used in different chemical processes in refineries, chemical & petrochemical plants, environmental processes, energy plants, and so on. The catalyst gradually loses its activity and needs to be replaced. The spent catalyst can be disposed of or recycled. Recycling is one of the best options for the catalyst users as it provides benefits of cost optimization and retaining an environment friendly image. Increasing cost of new catalyst, high disposal cost, and stringent environmental regulations also enforce the catalyst user to go for recycling their catalysts. Regeneration is a suitable recycling option which helps to restore the catalytic activity to a certain level. Catalyst regeneration can be done within the same plant where it is used. Alternately, it can be sold to a catalyst regenerator who will regenerate it off-site. The regenerated catalyst can either be used by the same company or by other companies for different applications.
