## **Abstracts**

### **SUMMARY**

Cycling Helmets are useful as safety gear to prevent or minimize injuries to the head and brain in an uncontrolled environment during riding a bike. According to the US Consumer Product Safety Commission, about 900 people, including more than 200 children are killed annually in bicycle related incidents, and about 60 percent of these deaths involve a head injury. Cycling helmets can help absorb impacts and save their life. A typical helmet has two main parts: a hard outer shell and a soft inner liner. The hard shell is designed to spread the force of an impact over a broader area so rider's skull is less likely to fracture, while the soft liner is meant to squeeze inward and absorb the impact energy, so less of it is transmitted to rider's head. Shells of cycling helmets are typically made of composite materials like fiberglass or lightweight carbon fiber, or very hard plastics such as polycarbonate or ABS. And liners are usually about 20cm (0.8 inches) thick and made of two layers of foam: a soft, bouncy layer that absorbs small bashes and bumps and a stiff layer that permanently deforms to absorb very hard impacts.

The report forecast global Cycling Helmet market to grow to reach xxx Million USD in 2020 with a CAGR of xx% during the period 2021E-2026F due to coronavirus situation.

Table Cycling Helmets are useful as safety gear to prevent or minimize injuries to the head and brain in an uncontrolled environment during riding a bike. According to the US Consumer Product Safety Commission, about 900 people, including more than 200 children are killed annually in bicycle related incidents, and about 60 percent of these deaths involve a head injury. Cycling helmets can help absorb impacts and save their

life. A typical helmet has two main parts: a hard outer shell and a soft inner liner. The hard shell is designed to spread the force of an impact over a broader area so rider's skull is less likely to fracture, while the soft liner is meant to squeeze inward and absorb the impact energy, so less of it is transmitted to rider's head. Shells of cycling helmets are typically made of composite materials like fiberglass or lightweight carbon fiber, or very hard plastics such as polycarbonate or ABS. And liners are usually about 20cm (0.8 inches) thick and made of two layers of foam: a soft, bouncy layer that absorbs small bashes and bumps and a stiff layer that permanently deforms to absorb very hard impacts.
