SUMMARY

Autoclave is a device that sterilizes instruments using steam under pressure. Autoclaves are used to sterilize diagnostic equipment, laboratory glassware, and surgical instruments by subjecting them to high-pressure steam at 249oF for 15-20 minutes, based on the nature of the material inside. The use of an autoclave for sterilizing materials and for treating biomedical waste is fast, safe, and convenient. Autoclaves are commonly used in laboratories and medical facilities. The most common type of autoclave is a metallic cylindrical vessel with temperature and pressure control knobs or switches on top. Figure Picture of simple Autoclave
