SUMMARY

Brake Pads are components of brake systems used in automotive and other applications. Brake pads are friction materials which bound to the surface that faces the brake rotor and take the brunt of the frictional force necessary to stop the car. In a disc brake system, the brake pedal activates a hydraulic line which squeezes the calipers against the rotors of the car's tires. Pads are positioned between the calipers and the rotors to absorb the energy and heat, and then provide enough grips to stop the car.
