### SUMMARY

A chandelier is defined as a lamp which is suspended from the ceiling either directly from a ceiling lamp outlet, or simply from a hook in the ceiling and then plugged into a common wall socket. Chandeliers use small, lower wattage bulbs that are usually shaped in the form of a candle flame, though these lamps are not limited to small bulbs. There are often three or more light bulbs in one chandelier, giving off from 100 to 400 watts of total light. Chandeliers can be used in nearly any room, from a fancy, formal dining room to a child's bedroom or game room. The most popular ones are the type with dangling cut glass crystals surrounding the bulbs, creating a beautiful spectrum of light. These more formal lamps are usually brass or gold plated, and will bring elegance and formality to the room in which they hang. While chandeliers can be appropriate in any type of room, choosing the correct size is paramount. A giant one will overcome a tiny room while a small one hung over a long dining room table will look lost. In general, a smaller room with dimensions of 10 x 10 ft (3.05 x 3.05 m) would comfortably house a chandelier no more than 20 inches (50.8 cm) in diameter. A 12 x 12 ft (3.66 x 3.66 m) room will hold one of up to 27 inches (68.58 cm) in diameter. An exceptionally large one with a diameter of 36 inches (91.44 cm) or more should only be hung in a room that is 14x 14 ft (4.27 x 4.27 m) or larger. When choosing a chandelier to hang over a table, it should normally hang at least 30 inches (76.2 cm) from the surface of the table, and should be about 12 inches (30.48 cm) narrower than the table's width.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the

industry at the end of the report.
