## **Abstracts**

### **SNAPSHOT**

A cochlear implant is a small, complex electronic device that can help to provide a sense of sound to a person who is profoundly deaf or severely hard-of-hearing. The implant consists of an external portion that sits behind the ear and a second portion that is surgically placed under the skin. An implant does not restore normal hearing. Instead, it can give a deaf person a useful representation of sounds in the environment and help him or her to understand speech.

The global Cochlear Implants market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
