## **Abstracts**

### **SNAPSHOT**

A continuous screen changer is a machine that filters out impurities in the polymer extrusion process—without interrupting the process when a dirty screen needs to be changed. It's used in melt filtration processes where debris can clog up screens in a very short time and process disruptions are costly. Markets and extrusion processes that employ continuous screen changers include pipe and profile, film and sheet, compounding, resin production, blow molding, nonwovens, and specialty material.

The global Continuous Screen Changers market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
