## **Abstracts**

### **SUMMARY**

Cyber Physical System is a mechanism controlled or monitored by computer-based algorithms, tightly integrated with internet and its users. In cyber physical systems, physical and software components are deeply intertwined, each operating on different spatial and temporal scales, exhibiting multiple and distinct behavioral modalities, and interacting with each other in a myriad of ways that change with context. Examples of CPS include smart grid, autonomous automobile systems, medical monitoring, process control systems, robotics systems, and automatic pilot avionics.

The global Cyber Physical market will reach Volume Million USD in 2019 and with a CAGR xx% between 2020-2026.
