## Abstracts

### Summary

A cystoscope is a medical device that an urologist can use to look inside a patient's urethra and bladder in a procedure called a cystoscopy. This may be done for diagnostic purposes, to collect information about a patient's condition, or for therapeutic purposes, where the doctor will perform a procedure to correct an issue like stones in the bladder. There are several different cystoscope designs and the procedure may require general anesthesia in some cases because it can be painful or unpleasant.
