SNAPSHOT

Daylight fluorescent pigments are luminescent materials that require no artificially generated energy to reflect colored light and to give off fluorescent light. Fluorescent pigments are composed of dyed organic polymers that are formulated to be solvents for the fluorescence dyestuff. In contrast to ordinary colors, light emitted from a fluorescent color adds to the light returned by simple reflection to give the glow characteristic of daylight-fluorescent materials.

The global Daylight Fluorescent Pigments market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
