SUMMARY

Ultradisperse diamonds (UDD), or diamond nanoparticles, belong to the set of the most frequently synthesized modern materials. Such strong interest is due to the fact that they have a series of special features, i.e. high adsorption capacity, high thermal conductivity, hydrophoby, large specific surface. These properties provide multiple prospects of UDD applicability.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
