## Abstracts

### Summary

Diamond core drilling is a high-speed, high-production method of drilling in concrete, stone, asphalt or masonry structures. It is fast, safe, quiet and does not cause impact or vibration damage to the immediate surrounding structure. Diamond core drilling minimizes spalling, eliminates fractures and doesn't transfer vibrations to the surrounding structure. The clean, straight openings require no patching or other cosmetic repair and allow the next operation to be installed or carried out without further delay.
