Snapshot

Electric Propulsion (EP) is a class of space propulsion which makes use of electrical power to accelerate a propellant by different possible electrical and/or magnetic means. An electrically powered spacecraft propulsion system uses electrical energy to change the velocity of a spacecraft. Most of these kinds of spacecraft propulsion systems work by electrically expelling propellant at high speed.

The global Electric Propulsion System market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
