## **Abstracts**

### **SUMMARY**

Laser drilling is the process of creating ???popped holes??? or ???percussion drilled??? holes in a material, which is achieved by pulsing a laser beam on a particular area repeatedly. Fiber laser light is created by banks of diodes. The light is channeled and amplified through fiber optic cable similar to that used for data transfer. The amplified light, on exiting the fiber cable, is collimated or straightened and then focused by a lens onto the material to be cut.'

The global Fiber Laser Drilling market will reach Volume Million USD in 2019 and with a CAGR xx% between 2020-2026.
