SUMMARY

A flight management system (FMS) is a fundamental component of a modern airliner's avionics. An FMS is a specialized computer system that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that modern civilian aircraft no longer carry flight engineers or navigators. In many ways, it's like the GPS in your car, with waypoints programmed in between the origin and the destination. You program in where you are going, and off it goes. The FMS will allow the airplane to hook up the autopilot, and maintain the heading within a few feet. It's amazingly accurate.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
