SUMMARY

Fluoropolymer is a fluorocarbon-based polymer with multiple strong carbon-fluorine bonds. It is known for its inertness to most chemicals, resistance to high temperatures. Fluoropolymers are among the most useful modern materials, providing nonstick surfaces for cookware and industrial products, waterproofing surface treatments for clothing and other substrates, stain barriers for textiles, high-purity fluid handling “plumbing” medical applications, wire & cable insulation jackets, high performance coatings for harsh environments, mar-free coatings for touch screen electronic devices, architectural and marine coating additives, backsheets for photovoltaic panels, films and membranes for technical, waterproof clothing and industrial applications.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
