SNAPSHOT

Geopolymers were developed nearly three decades ago by Davidovits who prepared alumino-silicate materials in alkaline at ambient temperature environments. Geopolymers are a type of inorganic polymer that can be formed at proper temperature by using aluminosilicate precursor material, such as metakaolin or fly ash as source materials and adopting alkali activated technology to form a solid binder that looks like and performs a similar function to OPC. Geopolymer binder can be used in applications to fully or partially replace OPC with environmental and technical benefits, including an 80 -90% reduction in CO2 emissions and improved resistance to fire and aggressive chemicals.

The global Geopolymer market size is estimated at xxx million USD with a CAGR xx% from 2015-2019 and is expected to reach xxx Million USD in 2020 with a CAGR xx% from 2020 to 2025. The report begins from overview of Industry Chain structure, and describes industry environment, then analyses market size and forecast of Geopolymer by product, region and application, in addition, this report introduces market competition situation among the vendors and company profile, besides, market price analysis and value chain features are covered in this report.
