SUMMARY

Hydrogen peroxide, (H₂O₂), is a clear, colorless, slightly viscous liquid. It is a green oxidant that decomposes in water and oxygen. It is slightly denser than water, but is miscible with water in all proportions, used principally for bleaching cotton and other textiles and wood pulp, in the manufacture of other chemicals, as a rocket propellant, and for cosmetic and medicinal purposes. Solutions containing more than about 8 percent hydrogen peroxide are corrosive to the skin. Hydrogen peroxide is marketed in the form of aqueous solutions. Major commercial grades are aqueous solutions containing 27.5, 35, 50, 70, or 90 percent hydrogen peroxide and small amounts of stabilizers (often tin salts and phosphates) to suppress decomposition.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
