## **Abstracts**

### **SNAPSHOT**

Intumescent Coatings are coatings that react under the influence of fire, swelling to many times their original thickness and producing an insulating foam-like coating or "char" which protects the substrate. Intumescent Coatings provide an appearance similar to that of a paint finish. At ambient temperatures, they remain stable. However, in a fire situation, the increase in temperature causes a chemical reaction.

The global Intumescent Coatings market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
