SNAPSHOT

Isobornyl acrylate is a monofunctional acrylic monomer that can be polymerised by free radicals. Isobornyl Acrylate is used as an intermediate product for polymer synthesis in the chemical industry. In particular it is used in UV and EB cured coatings, inks, and adhesives because of desirable properties, such as excellent adhesion, excellent water resistance, and good scratch resistance. Exposure to this chemical substance is very limited. Consumer risk and exposure is unlikely as isobornyl acrylate is manufactured and handled in industrial settings only. Isobornyl Acrylate should not enter surface water, groundwater and soil. General and substance specific operational conditions and risk management measures are in place to prevent exposure to workers and release to the environment. As isobornyl methacrylate (IBOMA) has the similar properties, applications, and synthesis technology with isobornyl acrylate (IBOA), so in this report, isobornyl methacrylate was counted, and the comparison between isobornyl acrylate and isobornyl methacrylate has also been made.

The global Isobornyl Acrylate market size is estimated at xxx million USD with a CAGR xx% from 2015-2019 and is expected to reach xxx Million USD in 2020 with a CAGR xx% from 2020 to 2025. The report begins from overview of Industry Chain structure, and describes industry environment, then analyses market size and forecast of Isobornyl Acrylate by product, region and application, in addition, this report introduces market competition situation among the vendors and company profile, besides, market price analysis and value chain features are covered in this report.
