### Summary

Uroflowmetry is a diagnostic test that is administered to check for abnormalities in the amount or flow rate of a patient's urine. The procedure is straightforward and painless, and simply involves urinating into a funnel device attached to an electronic meter. Doctors commonly use uroflowmetry to check for possible bladder obstructions, kidney problems, prostate enlargement, and urinary tract infections. Unusual test results indicate the need for additional testing procedures, such as x-rays and sample lab analysis.
