SNAPSHOT

a Linear Guide (Linear rolling guide) allows a type of linear motion that utilizes rolling balls. By using circulating balls between the rail and the block, a Linear Guide can achieve high precision linear motion. Compared to a traditional slide, the coefficient of friction for a Linear Guide is only 1/50th. Because of the restraint effect between the rails and the blocks, Linear Guides can take up loads in both the up/down and the left/right directions. With these features, Linear Guides can greatly enhance moving accuracy; it is especially true when accompanied with precision ballscrews.

The global Linear Guide Rail market size is estimated at xxx million USD with a CAGR xx% from 2016-2020 and is expected to reach xxx Million USD in 2021 with a CAGR xx% from 2021 to 2026. The report begins from overview of Industry Chain structure, and describes industry environment, then analyses market size and forecast of Linear Guide Rail by product, region and application, in addition, this report introduces market competition situation among the vendors and company profile, besides, market price analysis and value chain features are covered in this report.
