SNAPSHOT

Viscosity Index Improvers (VIIs), also known as Viscosity Modifiers, comprise a class of additives that improve the viscosity-temperature characteristics of the lubricant, making the oil's viscosity more stable as its temperature changes. Lubricant Viscosity Index Improvers are polymeric, and are added to lubricants to reduce the degree of change in viscosity seen at high and low temperatures.

The global Lubricant Viscosity Index Improvers market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
