SNAPSHOT

Material jetting is the equipment which could mold materials with material jetting technology. Material jetting has the added advantage of being able to 3D print using multiple materials at once. Objects can be produced with a variety of materials as well as customize the specific area where those materials are placed. This eliminates the need to print separate layers of different materials and assemble them later. In a single run, one can produce complete products with parts made from separate materials.

The global Material Jetting (MJ) market will reach xxx Million USD in 2019 and CAGR xx% 2019-2024. The report begins from overview of Industry Chain structure, and describes industry environment, then analyses market size and forecast of Material Jetting (MJ) by product, region and application, in addition, this report introduces market competition situation among the vendors and company profile, besides, market price analysis and value chain features are covered in this report.
