Summary

Nitric acid is poisonous liquid that gives off choking red or yellow fumes in moist air. It is a strong oxidizing agent. It ionizes readily in solution, forming a good conductor of electricity. It is miscible with water in all proportions. Nitric acid is a clear to slightly yellow aqueous solution that has been treated to remove most free nitrogen oxides. This highly corrosive intermediate chemical is a strong mineral acid used in the production of nitrate based fertilizers, nylon precursors and other specialty chemicals.
