SNAPSHOT

Valves are devices that regulate, direct or control the flow of a fluid (gases, liquids, fluidized solids) by opening, or partially obstructing various passageways. Valves are used in many applications throughout the industrial, commercial, and residential industries. Nuclear valves refer to the valves especially applied in nuclear power plants. Valves are used for many applications at a nuclear facility. During normal operation and transients, valves are needed for the nuclear facility's process control and regulation, and during accidents valves are used to manage safety functions. It is important to the safety of a nuclear facility that the integrity and performance of valves installed at the plant is assured until the end of their specified service life in those postulated situations and conditions that may prevail in their service places
