## **Abstracts**

### **SNAPSHOT**

A palletizing machine is a machine which provides automatic means for stacking cases of goods or products onto a pallet. Manually placing boxes on pallets can be time consuming and expensive; it can also put unusual stress on workers. In row-forming palletizing applications loads are arranged on a row forming area and then moved onto a different area where layer forming takes place. This process repeats until a full layer of goods and products are configured to be placed on a pallet.

The global Palletizing Machine market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
