SUMMARY

Polyester strapping is characterized by a very consistent tensile strength and very high elongation. Characteristics that are most decisive factor for a safe and reliable strapping method. Unlike strapping made from steel, Polyester strapping having its very high elongation, is able to absorb shocks and impacts during transportation and handling far better than steel strapping is capable of. The excellent elongation allows the substitution for the same application with Polyester strap having a lower breaking strength.

The report forecast global PET Strapping market to grow to reach xxx Million USD in 2019 with a CAGR of xx% during the period 2020-2024.

The report offers detailed coverage of PET Strapping industry and main market trends. The market research includes historical and forecast market data, demand, application details, price trends, and company shares of the leading PET Strapping by geography. The report splits the market size, by volume and value, on the basis of application type and geography.
