Snapshot

Point-to-multipoint (PMP) microwave, when used to backhaul mobile and data traffic, usually operates within licensed spectrum bands of 6-60 GHz and is a line of sight radio transmission technology. PMP microwave operates at multiple frequencies, although typically at 10.5, 26, 28 GHz. These frequencies benefit from high capacity, along with widely available and cost effective spectrum. PMP microwave can be used in Sub 6GHz frequencies, although these are limited by the lack of freely available spectrum and associated lack of capacity.

The global Point-to-Multipoint Microwave Backhaul Systems market will reach xxx Million USD in 2018 and with a CAGR of xx% between 2019-2025.
