SUMMARY

Burner is a device that controls the mixing of air with a combustible fuel to produce a stable flame pattern. In the report, we focused on burners used in oil and chemical industry. A flare system collects and discharges gas from atmospheric or pressurized process components to the atmosphere to safe locations for final release during normal operations and abnormal conditions. A flare system consists of a flare stack and pipes that feed gas to the stack. The type and amount of gas or liquids in the flare stack governs the sizing & brightness of the flare.
