SUMMARY

Silicon photonics is the study and application of photonic systems which use silicon as an optical medium. The silicon is usually patterned with sub-micrometre precision, into microphotonic components. These operate in the infrared, most commonly at the 1.55 micrometre wavelength used by most fiber optic telecommunication systems.[6] The silicon typically lies on top of a layer of silica in what (by analogy with a similar construction in microelectronics) is known as silicon on insulator (SOI).

The report forecast global Silicon Photonics market to grow to reach xxx Million USD in 2019 with a CAGR of xx% during the period 2020-2024.

The report offers detailed coverage of Silicon Photonics industry and main market trends. The market research includes historical and forecast market data, demand, application details, price trends, and company shares of the leading Silicon Photonics by geography. The report splits the market size, by volume and value, on the basis of application type and geography.
