### Snapshot

In a large solar photovoltaic (PV) array, multiple solar modules are connected in series in a string to build the voltage up to proper levels for the inverter. Multiple strings of solar modules are then combined together in parallel to multiply the string output currents to higher levels for input into the inverter. The smart PV combiner box is a device that combines the output of multiple strings of PV modules for connection to the inverter, support surge and overcurrent protection, and monitoring single-string current and voltage, surge protective device and breaker condition of PV array. It is typically used in the larger commercial and utility scale PV power plants (greater than 500kW).

The global Smart PV Array Combiner Box market will reach xxx Million USD in 2017.
