### Summary

Solid State Power Amplifier (SSPA) was designed for use in the most demanding applications, including satellite broadcasting systems, Airborne, Missile, Radars and Commercial & Communication. SSPAs: A series of combined field effect transmitters (FETs) amplify the RF signals. FETs are formed of semiconductor materials such as Gallium Nitride (GaN) or Gallium Arsenide (GaAs), which, through their high band gaps and electron mobility, are more useful at high frequencies than traditional materials like silicon (Si).

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
