Summary

Spinal fusion is surgery to permanently join together two or more bones in the spine so there is no movement between them. For patients who require spinal fusion surgery to treat lumbar degenerative disc disease (DDD), spinal fusion device is a treatment option. Spinal fusion has been used for many years to treat many painful conditions in the lumbar (lower) spine. Over the past decade, there has been dramatic improvement in the way that spinal fusion operations are performed. One major improvement has been the development of fixation devices. Designed to stabilize and hold the bones together while the fusion heals, these devices have greatly improved the success rate of fusion in the lower back. In spinal fusion, spinal fusion device is good auxiliary equipment. For many people, spinal fusion is a proven choice. And for those who choose spinal fusion, spinal fusion device offers a therapy that can eliminate the need for an additional procedure to harvest autograft.
