Summary

Tertiary amine is an amine that has the following general structural formula. In tertiary amines, nitrogen has three organic substituents. Examples include trimethylamine, which has a distinctively fishy smell, and EDTA. The use of tertiary amines is very extensive and is an important intermediate for the preparation of quaternary ammonium salts. It is widely used in the production of asphalt emulsifiers, chemical antistatic agents, foaming agents, oilfield demulsifiers, pesticide emulsifiers and fabric softeners.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
