SUMMARY

CTP refers to the process of imaging digital printing data (created by a computer) directly onto a printing plate. A thermal CTP recorder uses a high-power near-infrared laser to image digital printing data onto specially processed aluminum-base printing plates. CTP completely eliminates the need for film output and subsequent film to plate image transfer. Since processing is completely digital, there are no variations between plates, which results in superior printing quality.

This report describes the development of the industry by upstream & downstream, industry overall and development, key companies, as well as type segment & market application and so on, and makes a scientific prediction for the development industry prospects on the basis of analysis, finally, analyzes opportunities for investment in the industry at the end of the report.
