SNAPSHOT

Thermal Desorption Instrument is the instrument adopts thermal desorption theory to increase the volatility of dependents or contaminants such that they can be removed (separated) from the solid matrix (typically soil, sludge or filter cake). Thermal desorption is not incineration. The volatilized contaminants are then either collected or thermally destroyed. A thermal desorption system therefore has two major components; the desorber itself and the offgas treatment system. It is an environmental remediation technology that can be utilized in environmental air monitoring and exposure to chemicals at work, residual volatiles and materials emissions testing, food, flavour, fragrance & odour profiling, and defence and forensic, etc.

This report covers Thermal Desorption Instrument basic market data by segment:

- 1 by Product
- 2 by End-User
- 3 by Company
- 4 by Region
- 5 by Channel
- 6 by Price

This report can also be customized according to further requirements.
