### SNAPSHOT

TCO (Transparent conducting oxide) glass, the transparent conductive oxide coated glass, flat glass surface is coated by physical or chemical means evenly coated with a layer of transparent conductive oxide glass, including In, Sn, Zn, and Multiple Cd oxides and oxide glass composite materials. There are two main indicators of TCO glass First, the high visible light transmittance, and the other is a high electrical conductivity. Amorphous silicon thin film solar cells, because almost no horizontal conductivity of amorphous silicon, it must be deposited in a layer of a large glass surface area of the transparent conductive film in order to effectively collect the solar cell current, and this film must have anti-reflection The feature allows the majority of light into the absorption layer. The glass generally known as the substrate glass of thin film solar cells, thin film solar cells is one of the world's main PV(photovoltaic) glass market, solar TCO glass as a solar cell Front Electrode necessary components, the rapid growth of market demand, has become a hot high-tech coated glass products.
