### SNAPSHOT

A triazine is class of nitrogen-containing heterocycles. The parent molecules' molecular formula is  $C_3H_3N_3$ . They exist in three isomeric forms, 1,3,5-triazines being common. MMA Triazine is a cyclic tertiary triamine. It is mainly used as a scavenger for sour gases like  $H_2S$  and mercaptans in gaseous or liquid hydrocarbon streams. MEA-triazine is the most commonly used chemistry for applications requiring a non-regenerative  $H_2S$  scavenger. Other chemistries are available (MMA-triazine, glyoxal, zinc-based, iron-based, and others) but MEA-triazine has the highest market share because it is the lowest cost in use solution. Triazines are low cost in use despite the fact that the molar efficiency of the chemistry in capturing  $H_2S$  is significantly below theoretical maximum efficiency.

The global Triazine market size is estimated at xxx million USD with a CAGR xx% from 2015-2019 and is expected to reach xxx Million USD in 2020 with a CAGR xx% from 2020 to 2025. The report begins from overview of Industry Chain structure, and describes industry environment, then analyses market size and forecast of Triazine by product, region and application, in addition, this report introduces market competition situation among the vendors and company profile, besides, market price analysis and value chain features are covered in this report.
